

iOS Developer

We are looking for an iOS developer to undertake the UI part of a large e-commerce application for a well-funded start-up, you will be responsible for designing UI and bringing designs to life using the latest frameworks or libraries for the iOS platform our solution, you will have a 3+ years of experience working as a mobile front-end developer and commercial experience of creating user-friendly UIs. In these 3+ years, you should have experience with iOS application architecture and design with a strong understanding of RESTful JSON APIs principles, it will be desirable if you have experience or exposure to backend development but not necessary. We will be interested in seeing a portfolio with at least two native iOS applications.

Key Responsibilities

- Develop mobile applications (iOS: Objective-C, Swift).
- Develop test specs and approach for the application.
- Help contribute and create best practices for the team for iOS development.
- Build an intuitive and seamless mobile UX/UI for the mobile e-commerce of our project using Storyboard or SwiftUI.
- Be able to create and use RESTful API endpoints.
- Design, develop, test, deploy, maintain, and improve code.
- Experiment and prototype possible complex interactions and interfaces and brainstorm with other front-end developers on alternative solutions.
- Define and set up a strong foundation for long term maintainability for large scale systems and designing solutions for today's problems that accommodate what future iterations might bring.
- Able to create architectures and designs of mobile apps whilst coordinating with other front-end developers on a unified design creation.
- Communicate with the management regarding the status of projects and suggest appropriate deadlines for new functionalities.

Technical Competencies

- 3 years of object-oriented software development experience.
- 3+ years building applications for iOS devices using Swift).
- Experience designing clean and maintainable codebase.
- Strong understanding of RESTful JSON web API design principles.
- Experience in using version control systems like Git.
- Solid experience in documenting software solutions using diagrams and flowcharts.
- Experience with Agile methodologies.
- Strong understanding of firebase integration.
- Strong understanding of functional and object-oriented programming.
- Effective project management skills.
- Excellent communication skills.
